<b>Databases</b>	mySQL, Postgres, MongoDB
<b>Tools</b>	Github, VS code, Datagrip, Webstorm

## Projects

---

### Personal website

- Utilized VS Code to craft all pages, employing a combination of HTML, JavaScript, and CSS for a seamless and dynamic website.
- Integrated files and external links into the website, enhancing its functionality and connectivity.
- Deployed the website on the GitHub.io server, ensuring accessibility and smooth online presence.

### Whack-a-mole game

- Managed user input during gameplay, meticulously comparing it to the board to determine successful hits.
- Conducted comprehensive testing at the project's completion and performed a thorough code review.
- Collaboratively developed the game as a team project, implementing it in C++ using an online IDE.

### Banking system

- Utilized Java to structure classes for users and account types, creating a modular and scalable system with a focus on code reusability.
- Leveraged Java's inheritance to streamline code, facilitating shared functionalities and simplified maintenance.
